Professional Summary

Aspiring full-stack developer and fourth-year BSIT student majoring in System Development at De La Salle Lipa. Has been curious about how software works since childhood, and now enjoys building apps and websites that turn creativity into something useful — including Barangay Safety, an incident-reporting platform built solo with Flutter and Supabase to help Lipa City's urban barangays respond faster, and two Python desktop applications for clients who came through referrals. Capable, persistent and thoughtful. Seeking a Full-Stack or Software Developer OJT, open to other IT roles, to gain real-world experience, learn and grow. Available December 1, 2026 for 486 hours.

Key Skills

- **Mobile Development:** Flutter, Dart, Provider, maps and geolocation, push notifications
- **Backend & Database:** Supabase, PostgreSQL, SQL, Edge Functions, Node.js, REST APIs, error handling
- **Desktop & Data:** Python, C++, Tkinter, Matplotlib and CSV data handling
- **Web Development:** HTML, CSS, JavaScript, Astro, Tailwind CSS, Next.js, Bootstrap, responsive design, Vercel and Firebase Hosting
- **Data, Tools & Design:** Power BI, Visual Studio, Git and GitHub, Adobe tools and Figma
- **AI Tools:** ChatGPT, Microsoft Copilot, Claude, Gemini (used for automation, SQL/query support, and system development)
- **Soft Skills & Languages:** Quick learner, team player, detail-oriented, creative problem solver · Tagalog, English

Experience

Freelance Software Developer — Client Commissions

- **GMD Bakery — Order and Production Planner** **October 2026**
  - Replaced handwritten order slips with a Python/Tkinter app for orders, inventory, daily sales, reports and Matplotlib charts.
  - Built a production plan that computes, per day, the pieces still to bake after subtracting stock on hand, with a printable bake sheet.
  - Packaged as a portable Windows program with PyInstaller — runs from a USB drive with nothing to install; auto-saves with backups.
- **Failed Delivery & Redelivery Pattern Analyzer** **October 2026**
  - Built desktop and terminal versions on one shared engine that tracks delivery attempts and redeliveries, success rate by area, top failure reasons and trends, with four Matplotlib charts.
  - Enforced data-integrity rules (e.g. no attempts after a successful delivery) and covered them with 79 automated tests.

Projects and Achievements

Barangay Safety — Incident Reporting with Geo-Tagging and Interactive Maps **September 2025 – October 2026**

- Capstone project: sole developer of a Flutter mobile app and web dashboard on Supabase (PostgreSQL) for five high-density barangays in Lipa City.
- GPS geo-tagged incident reports with photos, live incident map, heatmaps and real-time responder tracking.
- Server-side auto-escalation of unanswered reports at 5, 10 and 15 minutes using pg_cron, with push alerts via Edge Functions and Firebase Cloud Messaging.
- Row-level security on every table, private photo storage with signed URLs, duplicate-photo detection, audit logs, and PDF/Excel exports.

Education

Bachelor of Science in Information Technology — Major in System Development
De La Salle Lipa | 2023 – 2027 (Ongoing, 4th Year)

Senior High School
San Guillermo Academy | 2021 – 2023
Awards: With Honors · Best in Research · With Honors in Work Immersion

Certifications

- Cyber Threat Management — Cisco Networking Academy (2026)
- Skills to Succeed Academy, 58 modules — Accenture (2026)
- Python Essentials 1 & 2 — Cisco × OpenEDG Python Institute (2026)
- DevRoutes: Learning How to Learn with Roadmaps — JPCS, De La Salle Chapter (2026)
